Education

Georgia Institute of Technology — Atlanta, GA

B.S. Computer Science, GPA: 3.9 — *May 2028*

- Concentrations: Systems & Architecture, Cybersecurity. Member, GreyHat Cybersecurity Club.
- Coursework: Operating Systems, Processor Design, Systems & Networks, Design & Analysis of Algorithms, Computer Organization & Programming, Digital Design Lab, Human Dimension of Cybersecurity.

Experience

Palantir Technologies — Palo Alto, CA

Software Engineer Intern — *Summer 2027*

- Summer 2027

GitHub — San Francisco, CA

Software Engineer Intern — *May 2026 – August 2026*

- Integrated Google Cloud as a first-party model provider into Copilot's model-serving platform in Go, automating deployment and health checks across 11 production endpoints & worked with MAI team to deploy their models.
- Audited the migration and identified idle provisioned capacity, raising throughput on a constrained endpoint 4.6x.
- Resolved a production outage by tracing 500 errors to an unindexed MySQL sort scanning 185K rows to return 127; instrumented the pipeline in Datadog, uncovering a nil stats client silently dropping every metric.

Georgia Tech Financial Services Innovation Lab — Atlanta, GA

Undergraduate Research Assistant (Time Series & Natural Language Processing) — *2025 – Present*

- Built a natural-language-to-SQL pipeline in Python using LangGraph with human-in-the-loop ambiguity detection, reaching 93.9% recall and 80.6% accuracy.
- Built a config-driven PyTorch pipeline that pretrains transformer forecasting models on synthetic time series, fine-tunes them on real-time macroeconomic data vintages, and benchmarks them against classical baselines on a SLURM GPU cluster.

The Home Depot — Atlanta, GA / Remote

Software Engineer Intern — *May 2025 – August 2025*

- Re-architected internal event software supporting 100+ annual events and 5,000+ associates, driving requirements across Product, Design, and Engineering.
- Built a Slack-integrated web application in Java Spring Boot and React, deployed on Google Kubernetes Engine with automated GitHub CI/CD pipelines.

Computacenter — Remote

Software Engineer Intern — *2022 – 2023*

- Built a Slack application in FastAPI that let administrators onboard and offboard 5,000+ employees across ServiceNow, Opsgenie, PRTG, and Slack from a single workflow.
- Developed a hardware error monitoring tool backed by NocoDB, scaled to 50+ customers.

Projects

Matchy | *FastAPI, Python, React, TypeScript* — *Fall 2025*

- Built a matching service for the non-profit Team IMPACT pairing student-athletes with children facing serious illness, combining web scraping with model-driven ranking; placed 2nd at the JPMorganChase hackathon and earned an internship offer.

PDF Malware Detector | *Python, scikit-learn, SVM* — *Spring 2025*

- Trained an SVM malware classifier on a 2022 PDF corpus, engineering structural features and benchmarking against logistic regression and random forest to reach 88% accuracy; presented results at Millennium's New York office.

Technical Skills

Languages: Go, Python, Java, TypeScript, JavaScript, C/C++, SQL
Backend & Infrastructure: Spring Boot, FastAPI, Kubernetes, Docker, GCP, AWS, MySQL, PostgreSQL, MongoDB
Observability & Tooling: Datadog, Grafana, Sentry, Splunk, Git, CI/CD, Linux
Frontend & Libraries: React, HTML/CSS, Pandas, NumPy, PyTorch, Playwright, BeautifulSoup
